

Octowax 17 Wax Emulsion

CHEMICAL NAME: Blend of paraffin and microcrystalline wax

PHYSICAL FORM: Aqueous anionic emulsion

PRODUCT SPECIFICATIONS		METHODS
Solids	53.7 – 55.7 %	SCC-040
pH , typical	10.5 – 12.4	PHC-010

PRODUCT DESCRIPTION

Octowax 17 can be an effective addition to the antidegradant components of latex rubber, especially in combination with non-staining antioxidants. Octowax 17 is a homogenized emulsion of blended waxes, paraffin and microcrystalline, which may be used in latex rubber as an antiozonant. The wax "blooms" during the cure process from the emulsion to the rubber surface, providing a barrier against ozone attack.

Octowax 17 is designed to be added directly to latex compounds. Usage levels are generally 1.0 - 5.0 parts based on the dry weight of the latex.

All ingredients used to produce Octowax 17 are listed on the TSCA inventory and the Canadian, DSL. This product has approval by the FDA under the following: CFR 21 Section 176.180.

STORAGE AND HANDLING:

Containers should be kept tightly closed. Protect from freezing. Contents should be stirred using mechanical agitation prior to use.
